WORKING PAPERS

The Economic Impact of Providing Work Authorization to Migrants in the United States
Doctoral Research

This study investigates how granting deportation protection and work authorization to immigrants in the United States influence economic opportunities for both migrants and native workers. By exploiting the expansion of the Temporary Protected Status (TPS) program, this paper aims to explore the extent to which the TPS affects labor market behavior among beneficiaries, and if it creates competition for jobs or complements the labor supply. This paper contributes to the understanding of how recent policies that expand lawful pathways to immigrate into the U.S. influence labor markets dynamics.
